Chagrin Falls Library
100 East Orange St. 44022
November 14th 6:00 – 8:00 PM

Climate Change: What it is & What we can do

- “Climate change” refers to the broader range of changes that are happening to our planet.
 - Examples include rising sea levels, shrinking mountain glaciers, accelerating ice melt in Greenland, Antarctica and the Arctic, and shifts in flower/plant blooming times
- Climate change is a consequence of global warming, which is caused mainly by people burning fossil fuels that put out heat-trapping gases into the air.

Cuyahoga County has two programs that help you, a citizen of the county, Ohio, and the global community, take action to reduce global emissions

- 1) our **solar co-op** (info. on the back) and 2) our **bike and scooter share** system

How Solar Benefits Homeowners.

Solar energy provides energy independence and security.

- Home solar systems pay for themselves in 9-13 years and generally last between 30 and 40 years in Ohio.
- Homeowners can save 7,000 to 30,000 dollars throughout the life of their solar array, depending on local electricity pricing and average usage.
- Average household solar system offsets 103 Metric tons of CO₂ in it's lifetime. The equivalent of 238 barrels of oil.

Cuyahoga County gets 8-10% of it's energy from our Brooklyn Landfill Solar Array. This is expected to save us 3 million dollars over the next 25 years.
